

Full Highlight Detail view

Users can zoom in to see detailed traffic, health & availability and breakdown this traffic by applications to see how the network is being used. If this circuit is part of a network users can understand the quality of the path on which their applications are being delivered.

Reports are vivid and easily understood, thanks to clear graphics and consistent colour coding. For any day, week or month Highlight provides a near real time understanding.

Choose a day, week or month View

Traffic Panel:
Data flows for the selected day, week or month in clear colour coded graphics

Traffic Trends Panel:
3 and 18 month summaries show 24hr and business hours activity

SLA Adherence

Health Detail and summary Panel:

- Discarded packets
- Queued / delayed packets
- Bad packets received (CRCs etc)
- Link outages

Click for a detailed list of outages

Performance Insight Panel:

- Clearly shows each delay test result
- SLA target shown as line
- Results below the line show SLA conformance
- Easy to see trends
- Jitter, packet-loss & delay data also available as Text

Application Insight Panel:

- See real time application breakdown
- Ensure critical applications don't suffer
- Identify unauthorised application use
- Base future plans on application profiles
